

# Building Report | Life Sciences Façade & Addition

## 3.9.18

The following are pictures from the week of March 5-9, 2018 in regards to the Life Sciences Building Façade Improvements and Addition Project. The interior of the addition is nearly complete and we are almost ready for inspection. In fact we should take occupancy of the addition next week if all goes according to plan. There is still a number of paint touch-ups, etc. still left to do. The furniture has arrived, been assembled, and generally set in place. Some of it will be moved to its final location once other work is completed. There is still exterior work to finish up on the addition and the building and that will happen over the next few weeks. Once the weather breaks there is a large amount of site remediation that will need to happen that will also take a few weeks to finish.

The top-left photo shows the progress of the installation of the Kieri brand board. This board is a sustainable product made out of sorghum straw. After installation it will be sealed to help protect it. When you look at the board up close it has an almost plant or animal cell feel to it which we thought was fitting for a science building.

The top-right photo shows some of the furniture for the addition. Here are a couple tables made to look like a couple squares from the periodic table of elements.

The bottom-right photo shows more of the finish painting that has been happening this past week. The majority of the painting is finished however there is still some touch-ups that will need to happen.

The bottom-left photo shows the newly placed concrete for the ramp off of the north entrance of the addition. This ramp is necessary due to the differences in the finished floor elevations between the Life Sciences Building and its neighbor the Career Technology Center.
