

Building Report | E/W Tech Renovations & Addition

5.24.19

The following are pictures from week of 5.20.19 - 5.24.19 in regards to the East/West Technology Buildings Renovations and Addition Project. Major demolition in West Tech has been pretty much completed, although there will still be some minor demo required to finish up in that building mostly dealing with mechanical and electrical. There are a lot of walls coming down in East Tech currently with the big push to get the entry opened up so the major spine through will run straight through the building as opposed to joggling as it does now. The old storm sewer system between the buildings has been removed in preparation for foundation work starting next week as the work needed to construct the addition begins. More asbestos abatement happened this week as well especially in the area of the old Data Processing Server Room and adjacent storage room as well as the existing staff restroom.

Photo #1 highlights the beginnings of the removal of the old screen wall and slab outside the north-west corner of West Tech where the gas tanks were stored when the welding lab in this building was active. Photo #2 (and associated small photo) show the demolition in the old welding lab which will become the new Information Systems Department Offices and Workroom. Photo #3 shows the site demolition and preparation in between the two buildings. The old storm sewer system and sidewalks were removed. Photo #4 shows the beginning of the process to remove all the old windows and frames. Not only were they inefficient from an energy standpoint, but the sealant around the glazing contained asbestos.

Building Report | E/W Tech Renov. & Addition [cont.]

5.24.19

Photo #5 shows the beginnings of the walls that need to come down to create the adjunct faculty work and break areas. Photo #6 shows the removal of the old offices that use to line the east corridor in East Tech. These offices and corridor will become the new Prep/Storage Room that will serve the new adjacent art classroom. Photo #7 is similar to #6, but looking the other way in associated with the same work. This new art classroom will allow the Art Program to have one base of operation as opposed to being spread out over two separate buildings. Photo #8 shows the now abated old Data Processing Server Room and adjoined storage space. This area will be split into a new server room and storage area.
