Course Outcome Summary

General Education Satisfier Course

MATH 124 Technical Mathematics II

Course Information

Division: Science/Mathematics
Contact Hours: 60
Total Credits: 4

Prerequisites

MATH 092, MATH 119 or qualifying score on accepted placement tests.

Course Description

This course is designed to provide advanced mathematics preparation for students in technology programs. It emphasizes concepts and applications of algebra, geometry and trigonometry to technical areas. The course includes geometry, graphs and charts, functions and graphs, trigonometry, vectors and polar coordinates, systems of equations, logarithms and statistics.

This course is approved as a General Education competency satisfier.

General Education Goal: Critical Thinking
Competency: Use Mathematics to effectively model and evaluate quantitative relationship
Learning Outcome: Students will apply mathematical concepts and methods to understand, analyze, and communicate in quantitative terms.

General Education Learning Objectives

A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.
B. Utilize linear, exponential, and other nonlinear models to evaluate the nature of relationships in real world problems.
C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.
D. Utilize a variety of problem solving strategies to solve problems and communicate findings using appropriate mathematical language and symbolism.

Course Outcomes

In order to evidence success in this course, each student will be expected to:

1. Identify/recognize common statistical tests to draw conclusions about relationships between numerical data
   Applies to General Education Objectives
   C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.

2. Identify/recognize the binary number system
   Applies to General Education Objectives
   A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.
3. Identify/recognize the hexadecimal number system
   Applies to General Education Outcome
   A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.

4. Demonstrate/practice application of basic geometry relationships to the calculation of perimeters, areas, volumes, and angles of common geometric figures and solids
   Applies to General Education Outcome
   B. Utilize linear, exponential, and other nonlinear models to evaluate the nature of relationships in real world problems.

5. Demonstrate/practice the use of the xyz-coordinate system to graph linear functions and determine the slopes and intercepts of the graphs
   Applies to General Education Outcomes
   C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.

6. Demonstrate/practice application of basic trigonometric relationships to solve for angles or sides of right triangles
   Applies to General Education Outcomes
   A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.

7. Demonstrate/practice resolving vectors into their right-angle components and finding the magnitude and direction of the resultant two vectors
   Applies to General Education Outcomes
   A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.
   B. Utilize linear, exponential, and other nonlinear models to evaluate the nature of relationships in real world problems.
   C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.
   D. Utilize a variety of problem solving strategies to solve problems and communicate findings using appropriate mathematical language and symbolism.

8. Demonstrate/practice conversion of coordinates of a point on a graph between rectangular and polar forms
   Applies to General Education Outcomes
   A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.
   B. Utilize linear, exponential, and other nonlinear models to evaluate the nature of relationships in real world problems.
   C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.
   D. Utilize a variety of problem solving strategies to solve problems and communicate findings using appropriate mathematical language and symbolism.
9. Demonstrate/practice solving two and three variable systems of linear equations by substitution or determinant methods
   Applies to General Education Outcomes
   A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.
   B. Utilize linear, exponential, and other nonlinear models to evaluate the nature of relationships in real world problems.
   C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.
   D. Utilize a variety of problem solving strategies to solve problems and communicate findings using appropriate mathematical language and symbolism.

10. Demonstrate/practice evaluation of formulas containing exponential or logarithmic terms
    Applies to General Education Outcomes
    A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.
    B. Utilize linear, exponential, and other nonlinear models to evaluate the nature of relationships in real world problems.

11. Demonstrate/practice analyzing and organizing linear and logarithmic data and representing it in an appropriate graphic form
    Applies to General Education Outcomes
    A. Use arithmetic and geometric concepts and representations to solve, estimate, calculate, and check answers to problems to determine the reasonableness of results.
    B. Utilize linear, exponential, and other nonlinear models to evaluate the nature of relationships in real world problems.
    C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.
    D. Utilize a variety of problem solving strategies to solve problems and communicate findings using appropriate mathematical language and symbolism.

12. Demonstrate/practice extracting data from graphical representations
    Applies to General Education Outcomes
    C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.

13. Demonstrate/practice use of common statistical measures to summarize numerical data
    Applies to General Education Outcomes
    C. Organize, analyze, and interpret various representations of data, including functions, graphs, and tables.
