## Welding Course Competency Evaluation Form

Student Name (PRINT) Requesting Credit:

Student School Where Credit Earned:

Instructor Authorizing Student Work:

List of Student Competencies (Course Mastery = 8 of 12 competencies to skill level 4 or 5):

(Rating Scale: 5 = Demonstrated Ability with no guidance, 4 = Demonstrated Ability with some guidance, 3 = Demonstrated Ability with major guidance, 2 = has been Exposed, 1 = no Exposure)

Student practices safe work habits using GTAW & related lab equipment.	5	4	3	2	1	0
Set up and operate typical welding lab equipment (iron workers, shears, grinders, saws, testing equipment, etc.)	5	4	3	2	1	0
Identifies & select common materials and proper tools used to complete tasks in a welding lab.	5	4	3	2	1	0
Demonstrated ability to operate PAC equipment and make straight cuts on gauge thickness stainless steel in various positions.	5	4	3	2	1	0
Identify, select, and prepare appropriate materials for completing GTAW objectives on aluminum.	5	4	3	2	1	0
Demonstrated ability to identify, setup, and operate GTAW equipment for aluminum.	5	4	3	2	1	0
Identifies common electrodes used for GTAW welding of aluminum.	5	4	3	2	1	0
Produces sound fillet and groove welds on gauge thickness aluminum in horizontal (2F & 2G) position using GTAW equipment.	5	4	3	2	1	0
Produces sound fillet and groove welds on gauge thickness aluminum in Vertical (3F & 3G) position using GTAW equipment.	5	4	3	2	1	0
Produces sound fillet and groove welds on gauge thickness aluminum in overhead (4F & 4G) position using GTAW equipment.	5	4	3	2	1	0
Performs visual testing (VT) of fillet and groove welds using proper instruments to evaluate welds in accordance with AWS D1.2 Structural Code.	5	4	3	2	1	0
Identifies discontinuities and explains corective actions for each application in accordance with the AWS D1.2 Structural Code.	5	4	3	2	1	0
	Set up and operate typical welding lab equipment (iron workers, shears, grinders, saws, testing equipment, etc.) Identifies & select common materials and proper tools used to complete tasks in a welding lab. Demonstrated ability to operate PAC equipment and make straight cuts on gauge thickness stainless steel in various positions. Identify, select, and prepare appropriate materials for completing GTAW objectives on aluminum. Demonstrated ability to identify, setup, and operate GTAW equipment for aluminum. Identifies common electrodes used for GTAW welding of aluminum. Produces sound fillet and groove welds on gauge thickness aluminum in horizontal (2F & 2G) position using GTAW equipment. Produces sound fillet and groove welds on gauge thickness aluminum in Vertical (3F & 3G) position using GTAW equipment. Produces sound fillet and groove welds on gauge thickness aluminum in vertical (4F & 4G) position using GTAW equipment. Performs visual testing (VT) of fillet and groove welds using proper instruments to evaluate welds in accordance with AWS D1.2 Structural Code. Identifies discontinuities and explains corective actions for each application in accordance	Set up and operate typical welding lab equipment (iron workers, shears, grinders, saws, testing equipment, etc.)5Identifies & select common materials and proper tools used to complete tasks in a welding lab.5Demonstrated ability to operate PAC equipment and make straight cuts on gauge thickness stainless steel in various positions.5Identify, select, and prepare appropriate materials for completing GTAW objectives on aluminum.5Demonstrated ability to identify, setup, and operate GTAW equipment for aluminum.5Identifies common electrodes used for GTAW welding of aluminum in horizontal (2F & 2G) position using GTAW equipment.5Produces sound fillet and groove welds on gauge thickness aluminum in Vertical (3F & 3G) position using GTAW equipment.5Produces sound fillet and groove welds on gauge thickness aluminum in overhead (4F & 4G) position using GTAW equipment.5Performs visual testing (VT) of fillet and groove welds using proper instruments to evaluate welds in accordance with AWS D1.2 Structural Code.5Identifies discontinuities and explains corective actions for each application in accordance5	Set up and operate typical welding lab equipment (iron workers, shears, grinders, saws, testing equipment, etc.)54Identifies & select common materials and proper tools used to complete tasks in a welding lab.54Demonstrated ability to operate PAC equipment and make straight cuts on gauge thickness stainless steel in various positions.54Identify, select, and prepare appropriate materials for completing GTAW objectives on aluminum.54Demonstrated ability to identify, setup, and operate GTAW equipment for aluminum.54Produces sound fillet and groove welds on gauge thickness aluminum in horizontal (2F & 2G) position using GTAW equipment.54Produces sound fillet and groove welds on gauge thickness aluminum in vertical (3F & 3G) position using GTAW equipment.54Produces sound fillet and groove welds on gauge thickness aluminum in overhead (4F & 4G) position using GTAW equipment.54Performs visual testing (VT) of fillet and groove welds using proper instruments to evaluate welds in accordance with AWS D1.2 Structural Code.54	Set up and operate typical welding lab equipment (iron workers, shears, grinders, saws, testing equipment, etc.)543Identifies & select common materials and proper tools used to complete tasks in a welding lab.543Demonstrated ability to operate PAC equipment and make straight cuts on gauge thickness stainless steel in various positions.543Identify, select, and prepare appropriate materials for completing GTAW objectives on aluminum.543Demonstrated ability to identify, setup, and operate GTAW equipment for aluminum.543Produces sound fillet and groove welds on gauge thickness aluminum in horizontal (2F & 2G) position using GTAW equipment.543Produces sound fillet and groove welds on gauge thickness aluminum in vertical (3F & 3G) position using GTAW equipment.543Produces sound fillet and groove welds on gauge thickness aluminum in overhead (4F & 4G) position using GTAW equipment.543Performs visual testing (VT) of fillet and groove welds using proper instruments to evaluate welds in accordance with AWS D1.2 Structural Code.543	Set up and operate typical welding lab equipment (iron workers, shears, grinders, saws, testing equipment, etc.)5432Identifies & select common materials and proper tools used to complete tasks in a welding lab.5432Demonstrated ability to operate PAC equipment and make straight cuts on gauge thickness stainless steel in various positions.5432Identify, select, and prepare appropriate materials for completing GTAW objectives on aluminum.5432Demonstrated ability to identify, setup, and operate GTAW equipment for aluminum.5432Identifies common electrodes used for GTAW welding of aluminum.5432Produces sound fillet and groove welds on gauge thickness aluminum in horizontal (2F & 2G) position using GTAW equipment.5432Produces sound fillet and groove welds on gauge thickness aluminum in vertical (3F & 3G) position using GTAW equipment.5432Produces sound fillet and groove welds on gauge thickness aluminum in overhead (4F & 4G) position using GTAW equipment.5432Performs visual testing (VT) of fillet and groove welds using proper instruments to evaluate welds in accordance with AWS D1.2 Structural Code.5432Identifies discontinuities and explains corective actions for each application in accordance5432	Set up and operate typical welding lab equipment (iron workers, shears, grinders, saws, testing equipment, etc.)54321Identifies & select common materials and proper tools used to complete tasks in a welding lab.54321Demonstrated ability to operate PAC equipment and make straight cuts on gauge thickness stainless steel in various positions.54321Identify, select, and prepare appropriate materials for completing GTAW objectives on aluminum.54321Demonstrated ability to identify, setup, and operate GTAW equipment for aluminum.54321Identifies common electrodes used for GTAW welding of aluminum.54321Produces sound fillet and groove welds on gauge thickness aluminum in horizontal (2F & 2G) position using GTAW equipment.54321Produces sound fillet and groove welds on gauge thickness aluminum in vertical (3F & 3G) position using GTAW equipment.54321Produces sound fillet and groove welds on gauge thickness aluminum in overhead (4F & 4G) position using GTAW equipment.54321Performs visual testing (VT) of fillet and groove welds using proper instruments to evaluate welds in accordance with AWS D1.2 Structural Code.54321Identifies discontinuities and explains corective actions for each application in accordance54321

Teacher: Please use the rating scale above to evaluate student's abilities while working in your welding program or on the job training activity. Circle the appropriate number to indicate student's ability level for each competency. Competency rating should be representative of student's job readiness as well as performance in your class.

MCC WELD PROGRAM CLASS CREDIT REQUESTE

\*Approval date:

WELD 104d (2CR) Request Date:

\*Valid only for one (1) year from date of completion. Recommendation: Using competency profile, course performance objectives, teacher evaluation, and grades (by signing below you recommend the student to receive 2.0 articulated college credits for successful completion of high school coursework in welding):

Student Signature:

Dean, Applied Science and Engineering Technology Monroe County Community College

HS Instructor Signature:

Welding Instructor Monroe County Community College
