

INFORMATION SECURITY POLICY

The credit card associations (American Express, MasterCard, Visa and Discover) have established the Payment Card Industry Data Security Standard (PCI DSS) for merchants to address the increasing threat of data compromise and to protect cardholder data and information security. This includes a security standard that incorporates requirements for security management, policies, procedures, and other critical protective measures.

The Foundation at Monroe County Community College will follow procedures to ensure that these requirements are met. This policy and its procedures will be reviewed annually by the Finance Committee to incorporate relevant security needs that may develop.
