

# Building Report | Parking Lot Renovations | Lots 1 & 2

8.30.19

The following are pictures from the week of 8.26.19-8.30.19 in regards to Parking Lot Renovations Project. This is the last report for this project as it is now completed. Both lots were broken down, had existing drainage structures rebuilt or added, regraded as necessary, repaved, and repainted to be both zoning code and ADA compliant. As part of our overall green (sustainability) initiative at the College this project used currently recognized environmentally friendly construction practices. Instead of bringing tons of new "raw" aggregate base all of the old asphalt was pulverized, ground in place, and then compacted to serve as the base for new pavement instead. This kept new stone from having to be brought in which meant there was less construction traffic, and therefore less carbon emissions from construction equipment.

— The top-left photo shows the beginning of the installation process for the new signage for the ADA (handicap) parking stalls in the now completed Parking Lot 1.

The top-right photo is an aerial view of the completed Parking Lots 1 and 2 provided by the paving contractor. Both were finished on time prior to the start of the Fall Semester as planned.

Below is an overall map of Main Campus for reference in reading this report. Parking Lots 1 and 2 have been labeled.
