

# Building Report | Parking Lot Renovations | Lots 4-6

8.21.20

The following are pictures from the weeks ending in 8.7.20 through 8.21.20 in regards to Parking Lots 4-6 Renovations Project. This is the first report for this project, which has already quite a bit of work completed already. Lot 4 is already complete with its existing pavement crushed and compacted in place with new base and finish layers of asphalt laid, new striping, and some new areas of concrete curbing. Lots 5 and 6 are well underway, and although more extensive as they are being totally redone will be finished soon. When completed these lots will now be joined together and will better serve the nearby Founders Hall and Student Services/Administration Building. Lot 6 has been expanded and will nearly double in parking capacity thanks to the demolition of the old SAE Garage and Tech Butler Buildings.

The top-left photo shows the beginning of this project which started with the demolition of the old SAE Garage and Tech Butler Building outside the southwest corner of Founders Hall. With these buildings removed it allowed the expansion of Lot 6 to take place.

The top-right photo shows the progress of the work in Lots 5 and 6. The area has been cleared of the pavement and curbing, new stone base has been brought and properly compacted and graded, and new concrete curbs and walks have been finished.

Below is an overall map of Main Campus for reference in reading this report. Parking Lots 4, 5, and 6 have been labeled.
