

MCCC - Security Incident

Date: 27 Aug 2018

Time: 12:00 PM

Reporting Officer: kwassus

Subject:: Other

Location: Life Science Building new lounge area

Witness: n/a

Victim: Complainant: same

Suspect: n/a

Narrative:

At approximately 5:30 pm of this date reporting officer was approached by victim who drove up to the officer while on routine vehicle patrol in the west parking area of campus. He inquired of the officer if any one turned in a Monroe Bank and Trust debit card issued to him. The officer advised this was the first the officer heard of it.

Victim indicated that he had classes earlier in the day in the Life Science building and remembers the last time he used the debit card was at one of the vending machines in the new lounge area. He believes it was near the noon hour. In checking later in the day for the debit card he discovered it missing. He isn't sure but suspects he might have dropped it while using it at the vending machine and thought he put it back in his wallet. The officer inquired if the victim had cancelled the card when he discovered it missing. Victim advised the officer he already had contacted Monroe Bank and Trust and had all transactions from the card blocked. The officer advised victim he would check the cameras for that area of the building at the time he indicated and would contact him if the officer located the card or discovered someone picking it up.

The officer returned to the office and pulled up the camera playback for the time indicated. The officer noted and observed the victim approached and used the vending machines at 11:46:42 of this date. He completed his transaction and walked back in the building at 11:48 am. The officer did not observe victim drop anything on the ground during the time he was using the vending machines or when he walked away. The officer checked the Life Science building during his shift with no further results. The officer was unable to check with the switchboard to see if anyone turned in the card as they had already departed for the evening by the time the incident was reported.

This incident is inactive pending further investigative leads.
